

**The Apple Orchard**  
Adjacent to Bruksstaden's lowest point lies a rare and valuable space - identified in this proposal as one of the site's green catalysts. To enhance its potential, the proposed Orchard Park is designed as a green corridor, linking the site to the larger park system of eastern Eslöv. Open-air stormwater management is introduced as a context-sensitive and future-oriented solution for the development of Bruksstaden.

**The Sports Facilities and Primary School**  
A smart way to meet the industrial development to the north - while maintaining vibrant community life - is to integrate a city-wide sports facility and swimming hall. To increase density, a primary school is placed above the sports center, making use of its green roof as a shared courtyard.

**Block Mörtén - north housing**  
Inspired by Eslöv's paradox - the industrial city among castles - the blocks are organized using geometric elements borrowed from both medieval architecture and industrial rationalism.

**The Wooden Canopy**  
Connecting Östergatan and Bruksstaden, the Wooden Canopy is a semi-open pathway that invites residents and visitors to move through, meet, and take shelter throughout the year. It is designed using parametric tools that respond to both the intended playful architectural form and the need to adapt to the existing topographic lines.

**The Central Square**  
The heart of the *Bricks and Blossoms* proposal lies here, at the Central Square - a meeting point of crossroads where people pass through or gather for open-air events, or to witness the weekly journey of the freight train. This generous space invites eastern and western Eslöv to continue growing together.

**Block Mörtén - south housing**  
The eastern block of Bruksstaden contains approximately 70% of the new housing development. The design is structured to create an urban front toward Östergatan, minimizing noise pollution. Solar panels are used to minimize energy consumption and shared greenhouses offer the possibility to cultivate food.
